Our area of expertise : scientific mediation

Mediators decipher knowledge that is considered complex, facilitate science-society debates and involve citizens in collective participatory projects. The question of training and professionalisation of the professions of scientific mediation is therefore essential in order to formalise know-how, enhance it and pass it on.

Our missions

- To support the development of the skills of professionals in the field of dissemination and of knowledge production
- Creating spaces for dialogue between practices and research
- Documenting the transformations of the scientific, technical and industrial culture
- Develop reflexivity on the job
- Valuing a profession and its values: inclusion, accessibility, participation, critical thinking, empowerment of the public.

Our approach : the crossing of approaches and the pooling of skills

Experimentation and Research

The School of Mediation offers a lively and evolving programme, based on the reality of the field and the development of new knowledge.

It develops an approach

"Training-Experimentation-Research:

- identify changes in practices and representations
- prototyping, testing, evaluating mediation actions
- formalise this knowledge so that it can be shared.

Co-construction

All the activities of the Mediation School are designed by teams of several structures and profiles to vary the approaches, skills and experience.

The multi-partner project brings together actors :

- of scientific culture
- research
- of adult education.

Our offer : a varied catalogue to meet all your needs

Our courses

Our training courses are led by Certified trainers with experience in scientific cultural mediation. They balance theoretical insights with methods that are easy to implement back in the workplace.

- INTER training courses. An annual programme of face-to-face training courses in Paris, to mix structures and experiences.
- INTRA training. Our trainers travel to your premises and train your teams. To develop a structure in depth and strengthen local links.
- Tailor-made training, designed to meet your specific constraints and problems. Face-to-face training, virtual classes, asynchronous and hybrid e-learning modules...

Our workshops

The workshops ensure 80% practical application. To test a format, a mediation technique, to co-construct a project.

Our professional meetings

These free thematic cycles are an opportunity to expand your network, to discover tools, to question their practices and to make the link between research and innovations in the field.

The School of Mediation is also training engineering, monitoring and resources on professional practices.
